

Kiwamu Okabe - Research and Development Engineer

Phone: +81-90-3524-7064
Email: kiwamu@debian.or.jp
Homepage: <http://www.masterq.net/>

Interests

ATS programming, NetBSD kernel programming, Debian project, Haskell programming.

Work Experience

August 2014 - Present: Part-time researcher at RIKEN Advanced Institute for Computational Science

February 2014 - Present: Self employed software engineer at METASEPI DESIGN

- Support to develop any embedded software
- ATS language consulting
- Manage Metasepi Project and develop the core technology

July 2013 - February 2014: Freelance

- Research and develop Ajhc Haskell Compiler

March 2012 - July 2013: MIRACLE LINUX CORPORATION

- Verify PowerPC Linux and debug/fix SMP Race Condition
- Debug and fix PowerPC crash command's virtual memory paging BUG
- Design new Windows installer using NSIS
- Introduce and maintain new git server for internal use
- Verify and tune performance of Digital Signage on new hardware

April 2001 - February 2012: Software Development Engineer at Ricoh Company, Ltd.

April 2010: Port OS to new x86 hardware

Port NetBSD-2.0 to new x86 hardware.

- Select BIOS product from three companies. Measure the quality, support, boot time and many evaluation items before choosing.
- Decide to change design from old Option BIOS.
- Calculate boot time before porting OS. Suggest and plan to tune boot time.

April 2008: Develop and technical support NetBSD OS

Become technical leader to maintain and support Ricoh's multifunction printer. My efforts are following.

- Debug and fix virtual memory's page daemon.
- Debug and fix the BUG fail close(2) on only wifi network.
- Design power down process by software trigger, using Solid State Relay and watchdog.
- Get stability against shutdown on msdosfs

April 2006: Technical support to version up NetBSD-1.5 to 2.0

- Design NetBSD-1.5 style SD card format for NetBSD-2.0.

April 2006: Develop POSIX thread library

Replace user level POSIX thread library with NetBSD-2.0 m:n thread. My efforts are following.

- Research the presence of thread-safe and cancel-safe in kernel, libc and libpthread.
- Write test code to get thread-safe and cancel-safe.
- Add API into the m:n thread library. Because printer application depend on the missing API.
- Debug and fix signal BUGs in the m:n thread library.

June 2004: Tune multifunction printer boot time as 10 seconds

Before my tune, the printer boot time is 30 seconds. Ricoh's multifunction printer "imagio" ¹ use the method and tool, ever now. My efforts are following.

- Develop a tool analyze log dumped by bootloader, kernel, init process and application.
- Analyze IPC network, and advice how to get speed to application developer.
- Split application as groups for pre-boot and post-boot.

October 2003: Develop new BIOS for multifunction printer

Order new BIOS to new company. Develop new BIOS together at the United States.

December 2002: Develop firmware in wifi chip

Join team to develop wifi chip using ARM architecture.

November 2002: Design secure boot for multifunction printer on x86

My efforts are following.

- Port and design bootloader using public key algorithm authentication
- Design the format include secure key in SD card
- Order application to format SD card with custom partition, and support

¹<http://www.ricoh.co.jp/imagio/>

July 2001: Develop BIOS and bootloader for multifunction printer on x86 architecture

My first work at Ricoh. Ricoh's multifunction printer "imagio" ² use my bootloader design, ever now. My efforts are following.

- Design specification to customize the BIOS for printer
- Order self-diagnostic program and support
- Design hardware dependent data structure to configure bootloader and kernel
- Design Option BIOS to boot on SD card

Education

- March 2001: Master of Engineering from Department of Electrical and Electronic Engineering, Tokyo Metropolitan University.
The thesis: "Multimode Quartz Crystal Microbalance" ³

Publications and Reports

- Kiwamu Okabe and Takayuki Muranushi. "Systems Demonstration: Writing NetBSD Sound Drivers in Haskell" ⁴. Haskell Symposium, 2014.
- Kiwamu Okabe, Hiroki MIZUNO and Hidekazu SEGAWA. "強い型による OS の開発手法の提案" ⁵. 第 55 回プログラミング・シンポジウム, 2014.

Activities

Open-source projects

Metasepi project ⁶

- Challenge to create an open-source Unix-like operating system designed with strong type such as ML or Haskell.
- Rewriting NetBSD kernel using Ajhc Haskell compiler. <https://github.com/metasepi/netbsd-arafura-s1>

Ajhc Haskell compiler ⁷

- Extend and add embedded features to Jhc Haskell Compiler <http://repetae.net/computer/jhc/>.
- Ajhc has thread-safe and reentrant runtime. Also has Erlang style GC. It means Ajhc's Haskell context has own GC heap. GC can run on tiny CPU such as Cortex-M3 with 32kB RAM.

⁶<http://metasepi.org/>

⁷<http://ajhc.metasepi.org/>

Japan ATS User Group ⁸

- An user group for ATS language <http://www.ats-lang.org/> promotion of utilization. Translating ATS documents into Japanese.

Debian Maintainer ⁹

- Maintained uim package at Debian squeeze, and packages using Haskell at sid.

Carettah ¹⁰

- A presentation tool written with Haskell. My slides http://www.slideshare.net/master_q/ are created by the tool.

Computer Skills

- Languages: Haskell, C, ATS, Intel assembler, Ruby
- Platforms: Linux, NetBSD, Android NDK, MinGW
