Kiwamu Okabe - Research and Development Engineer

Phone: +81-90-3524-7064
Email: kiwamu@debian.or.jp
Homepage: http://www.masterq.net/

Interests

ATS programming, Kernel programming, Debian project, Strongly typed language, Haskell programming.

Work Experience

March 2015 - Present: System Enginner at Centillion Japan Co., Ltd.

- Software engineering for cloud computing

August 2014 - Present: Part-time researcher at RIKEN Advanced Institute for Computational Science

- Research embedded functional programming

February 2014 - Present: Self-employed Software Engineer at METASEPI DESIGN

- Support to develop any embedded software

- ATS language consulting

- Manage Metasepi Project and develop the core technology

September 2014 - December 2014: Software engineer at Axsh co., LTD.

- Develop an OpenFlow application named "OpenVNet" [1]

July 2013 - February 2014: Freelance

- Research and develop Ajhc Haskell Compiler

March 2012 - July 2013: MIRACLE LINUX CORPORATION

- Verify PowerPC Linux and debug/fix SMP Race Condition

- Debug and fix PowerPC crash command's virtual memory paging BUG

- Design new Windows installer using NSIS

- Introduce and maintain new git server for internal use

- Verify and tune performance of Digital Signage on new hardware

---

[1] https://github.com/axsh/openvnet

April 2001 - February 2012: Software Development Engineer at Ricoh Company, Ltd.

April 2010: Port OS to new x86 hardware

I ported NetBSD-2.0 to new x86 hardware, and calculated boot time before porting OS.

April 2008: Develop and technical support NetBSD OS

I became technical leader to maintain and support Ricoh's multifunction printer. Also I debuged and fix many kernel level BUGs. I designed power down process by software trigger.

April 2006: Develop POSIX thread library

I replaced user level POSIX thread library with NetBSD-2.0 m:n thread. My efforts are following.

- Research the presence of thread-safe and cancel-safe in kernel, libc and libpthread.

- Write test code to get thread-safe and cancel-safe.

- Add API into the m:n thread library. Because printer application depend on the missing API.

- Debug and fix signal BUGs in the m:n thread library.

June 2004: Tune multifunction printer boot time as 10 seconds

Before my tune, the printer boot time is 30 seconds. Ricoh's multifunction printer "imagio" [2] use the method and tool, ever now. Develop a tool analyze log dumped by bootloader, kernel, init process and application. Analyze IPC network, and advice how to get speed to application developer. Split application as groups for pre-boot and post-boot.

October 2003: Develop new BIOS for multifunction printer

Develop new custom BIOS together at the United States.

November 2002: Design secure boot for multifunction printer on x86

I re-designed bootloader to support public key algorithm authentication, and designed the format include secure key in SD card

July 2001: Develop BIOS and bootloader for multifunction printer on x86 architecture

My first work at Ricoh. Ricoh's multifunction printer "imagio"[3] use my bootloader design, ever now. Also I designed hardware dependent data structure to configure bootloader and kernel, and Option BIOS to boot on SD card

Education

- March 2001: Master of Engineering from Department of Electrical and Electronic Engineering, Tokyo Metropolitan University.
  The thesis: "Multimode Quartz Crystal Microbalance" [4]

Publications and Reports

- Kiwamu Okabe and Takayuki Muranushi. "Systems Demonstration: Writing NetBSD Sound Drivers in Haskell" [5]. Haskell Symposium, 2014.

- Kiwamu Okabe, Hiroki MIZUNO and Hidekazu SEGAWA. "強い型による OS の開発手法の提案" [6]. 第 55 回プログラミング・シンポジウム, 2014.

- Kiwamu Okabe. "ATS 言語を使って不変条件を API に強制する". [7] 夏のプログラミング・シンポジウム 2014, 2014.

Activities

Open-source projects

Metasepi Project [8]

- Challenge to create an open-source Unix-like operating system designed with strong type such as ML or Haskell.

- Rewriting NetBSD kernel using Ajhc Haskell compiler. `https://github.com/metasepi/netbsd-arafura-s1`

Ajhc Haskell compiler [9]

- Extend and add embedded features to Jhc Haskell Compiler `http://repetae.net/computer/jhc/`.

- Ajhc has thread-safe and reentrant runtime. Also has Erlang style GC. It means Ajhc's Haskell context has own GC heap. GC can run on tiny CPU such as Cortex-M3 with 32kB RAM.

Japan ATS User Group [10]

- An user group for ATS language `http://www.ats-lang.org/` promotion of utilization. Translating ATS documents into Japanese.

Debian Maintainer [11]

- Maintained uim package at Debian squeeze, and packages using Haskell at sid.

Carettah [12]

- A presentation tool written with Haskell. My slides `http://www.slideshare.net/master_q/` are created by the tool.

Computer Skills

- Languages: Haskell, C, ATS, Intel assembler, Ruby

- Platforms: Linux, NetBSD, Android NDK, MinGW
